

Senior Immunologist

Longevity Biotech is looking to add a leading immunologist with a focus on neurological disorders to our growing team. Your expertise identifying and characterizing various cell types along with their secreted cytokines will be heavily utilized as we expand our internal capabilities to assay libraries of novel drug candidates. A critical eye towards determining immune profiles from raw data is a key requirement. You will perform statistically significant surveys across in vitro, in vivo and ex vivo samples to ensure a complete product profile. You must be a self-starter who can quickly contribute to our fast-paced culture and involve internal and external KoLs as needed.

This role is a key member of the team where you will work directly with other bench scientists in addition to senior leadership. Your work product will be carefully considered and used as part of the overall review process to guide clinical trial designs and lead / backup candidate selection. You will contribute to the company objectives while working with cutting edge technology to help improve human health outcomes.

Ideal Candidate Profile

- 8+ years of commercial in vitro / in vivo immunology experience
- Ph.D. in molecular biology, immunology, inflammation and / or immunomodulation
- Expertise in the measurement and analysis of immunological assays: cell proliferation, cytokine production, FACS-based immunophenotyping, suppression assays
- Strong communication / presentation skills
- Strong project management skills
- Evidence of significant professional accomplishments
- Clinical trial design and clinical data analysis experience preferred
- Statistical analysis of datasets (large and small) is preferred
- Prior experience with senior project review committees is preferred

Longevity Biotech offers individually-tailored compensation packages which include competitive cash compensation and meaningful equity participation, continuous career development, transit and health benefits.
